

Watsonx.assistant Setup

1: Adding Custom Extension

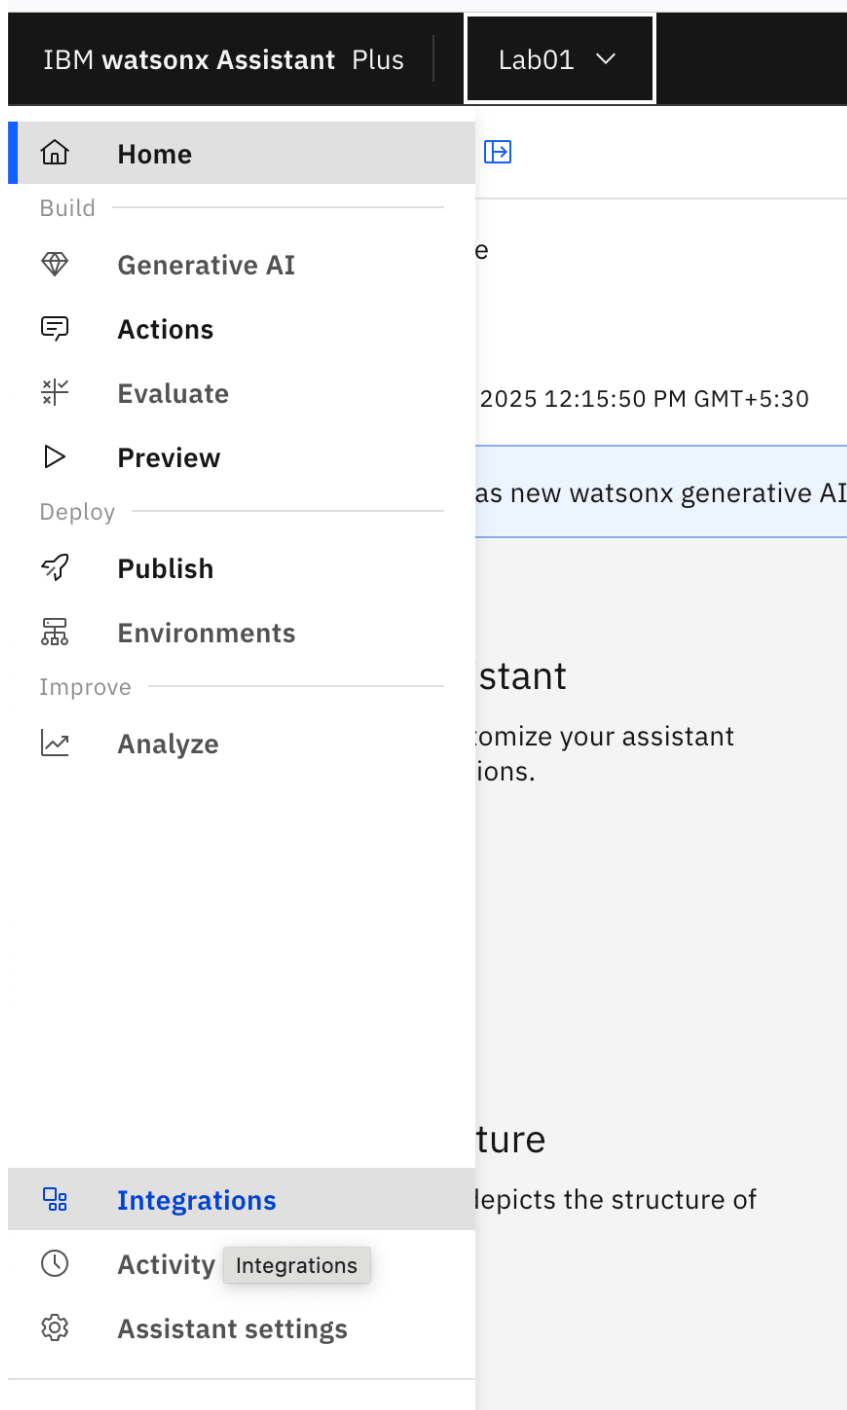

1.1 Create new Assistant

1.2 Enter Name as Lab01

The screenshot shows the 'Create a new assistant' form. The form has a title bar with a close button. The fields are: 'Assistant name' with the value 'Lab01', 'Description (optional)' with a placeholder 'Add a description for this assistant', and 'Assistant language' with a dropdown menu showing 'English (US)'. A note below the language dropdown states: 'This is the language your assistant will speak.' At the bottom, there are two buttons: 'Cancel' and 'Create assistant'.

1.3 From Left Navigation, select Integration option.

1.4 Click on Build Custom Extension

[Get started](#) [Basic information](#) [Import OpenAPI](#) [Review extension](#)

Get started

Create a custom extension to tailor the experience for your customers.

Steps to setting up custom extensions:

1. Provide an extension name and description that clearly explains what the extension accomplishes.
2. Import your OpenAPI document as a JSON file to start building your custom extension.
3. Select the environment (Production, Development, or Stage) to use your extension and the authentication type to complete the setup process.

1.5 Enter Extension Name as “WD” and click Next

1.6 Import OpenAPI, Import the WD.json

Custom extension

[Close](#)[Next](#)

[Get started](#) [Basic information](#) [Import OpenAPI](#) [Review extension](#)

Import OpenAPI

Import an OpenAPI document in a .json format, describing the authentication and methods for your extension.

Drag and drop file here or click to upload

WD.json

This screenshot shows the 'Basic information' step of the custom extension wizard. At the top, there's a progress bar with four steps: 'Get started' (selected), 'Basic information' (active), 'Import OpenAPI', and 'Review extension'. Below the progress bar, the title 'Basic information' is followed by a sub-header: 'Having a clear name and detailed description will help provide context and clarity to what your extension does.' There are two input fields: 'Extension name' with the value 'CRATE_MX_JOB_PLAN' and 'Extension description' with a character count of '0/128'. An example text is provided for the description: 'Example: This extension provides an integration with an external application.'

1.16 Select “create_Jobplan.json” as OpenAPI Spec.

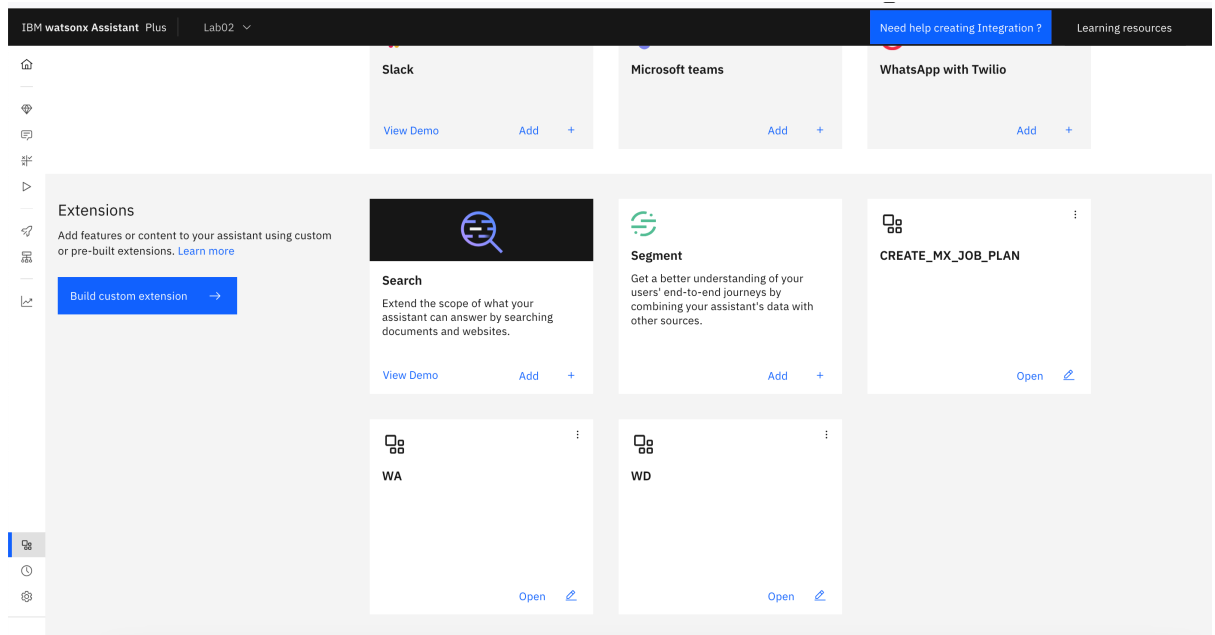

Custom extension

Close

Next

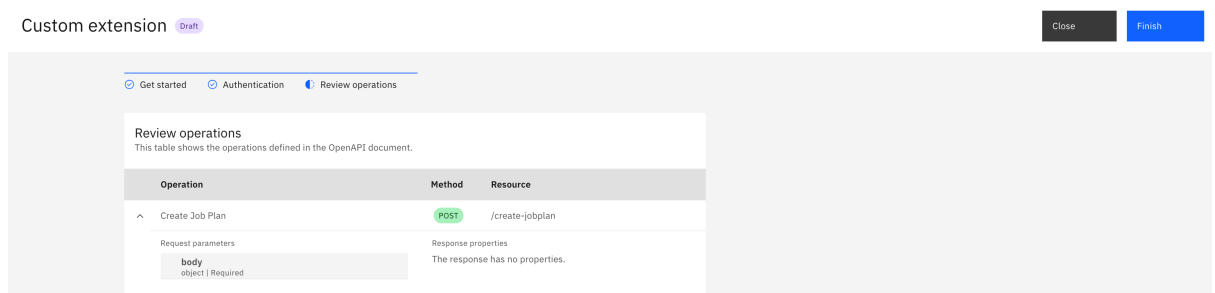

This screenshot shows the 'Import OpenAPI' step of the custom extension wizard. The progress bar at the top now has 'Import OpenAPI' as the active step. The title 'Import OpenAPI' is followed by the instruction: 'Import an OpenAPI document in a .json format, describing the authentication and methods for your extension.' Below this is a large text area with the placeholder 'Drag and drop file here or click to upload'. At the bottom, a file named 'create_jobplan.json' is listed with a close button (x) to its right.

1.17 Click Next, and Finish

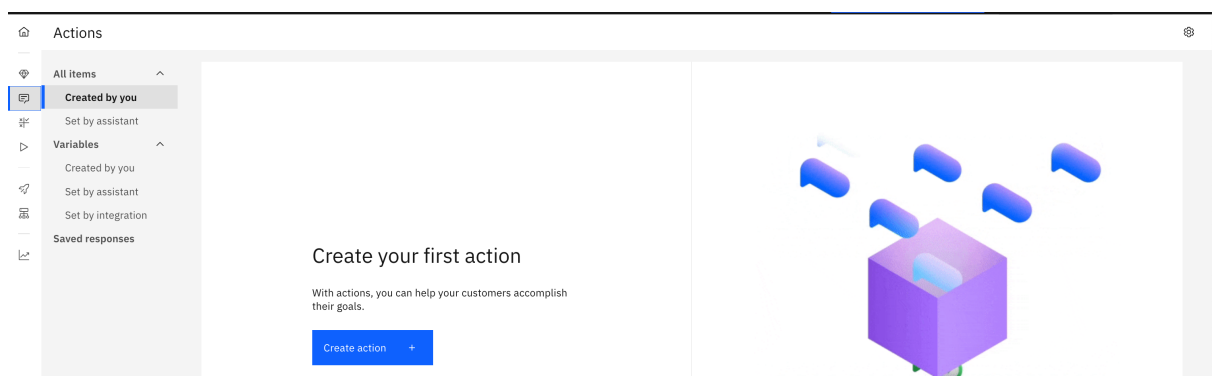

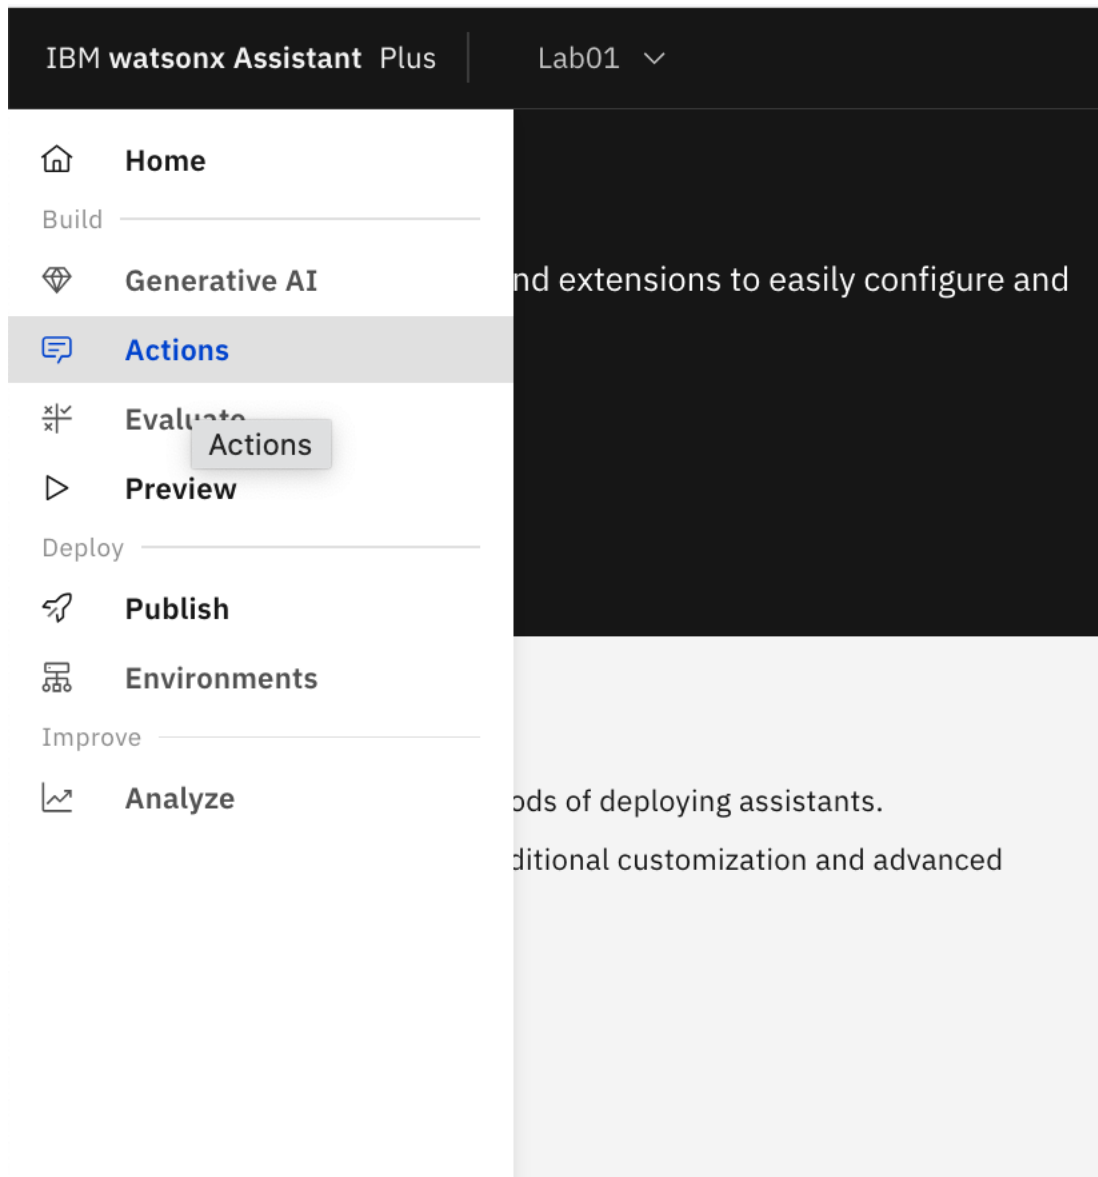

1.18 Add the extension to Watsonx.assistant

1.19 Verify the server and click Next and finish

2: Import the actions

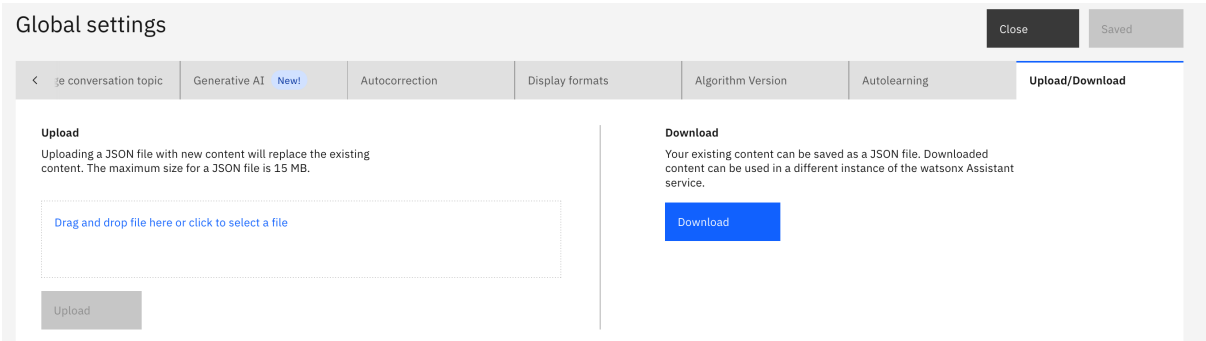

2.1 Select Actions

2.2 Select Global settings

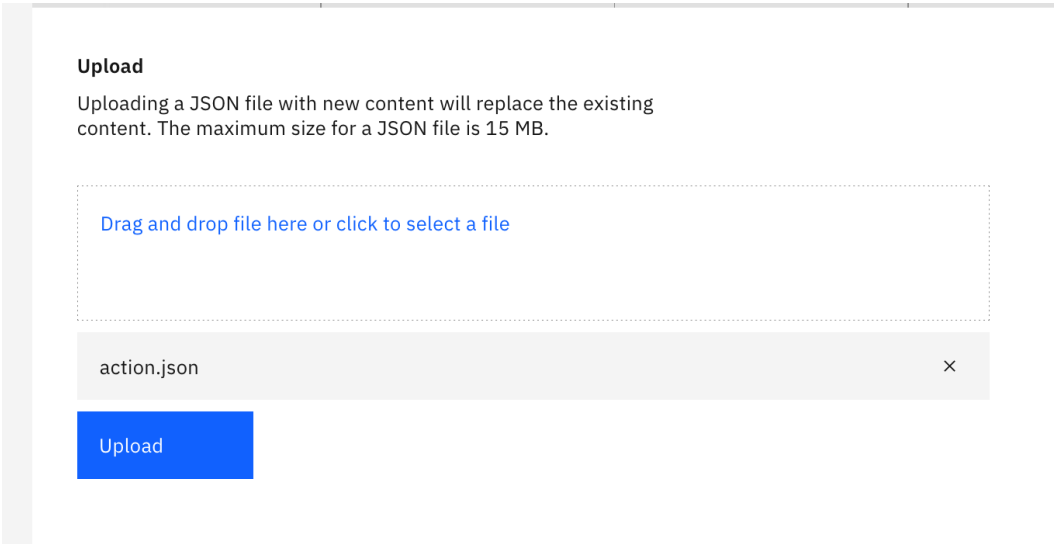

2.3 Navigate right and select Upload/Download option

2.4 Click on Drag and drop file here option

2.5 And select actions.json file

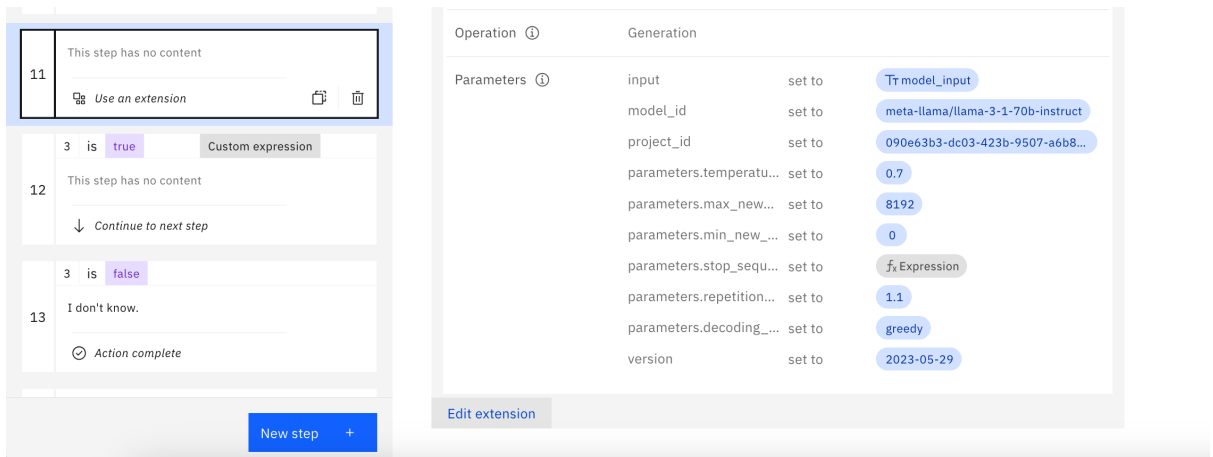

2.6 This will import the action as below

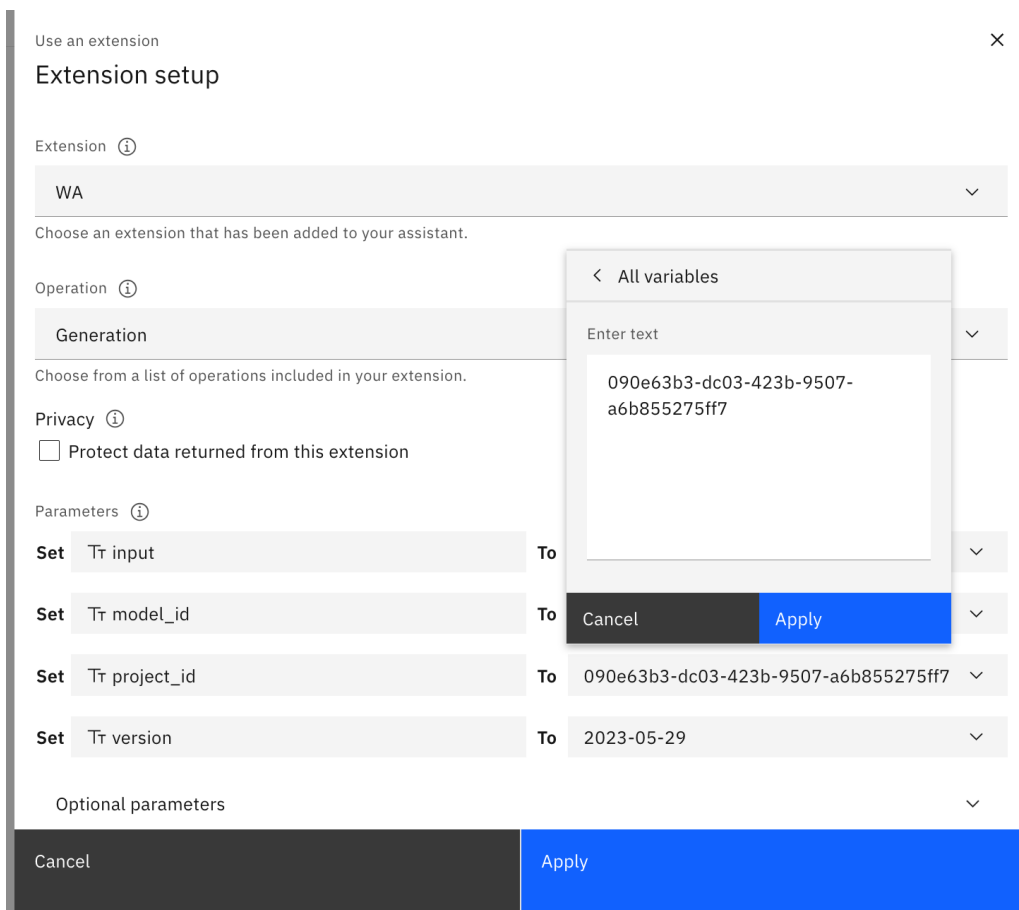

2.7 Click on Q&A_backup title

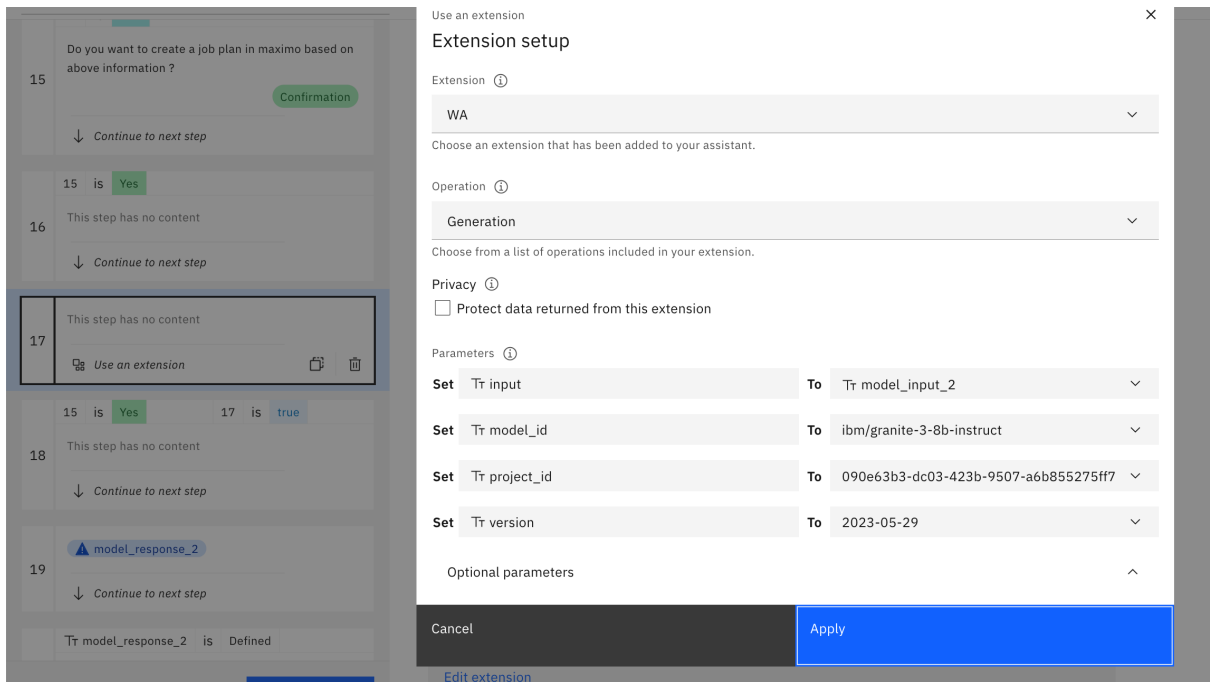

2.8 Click on step 3, and select Edit extension option

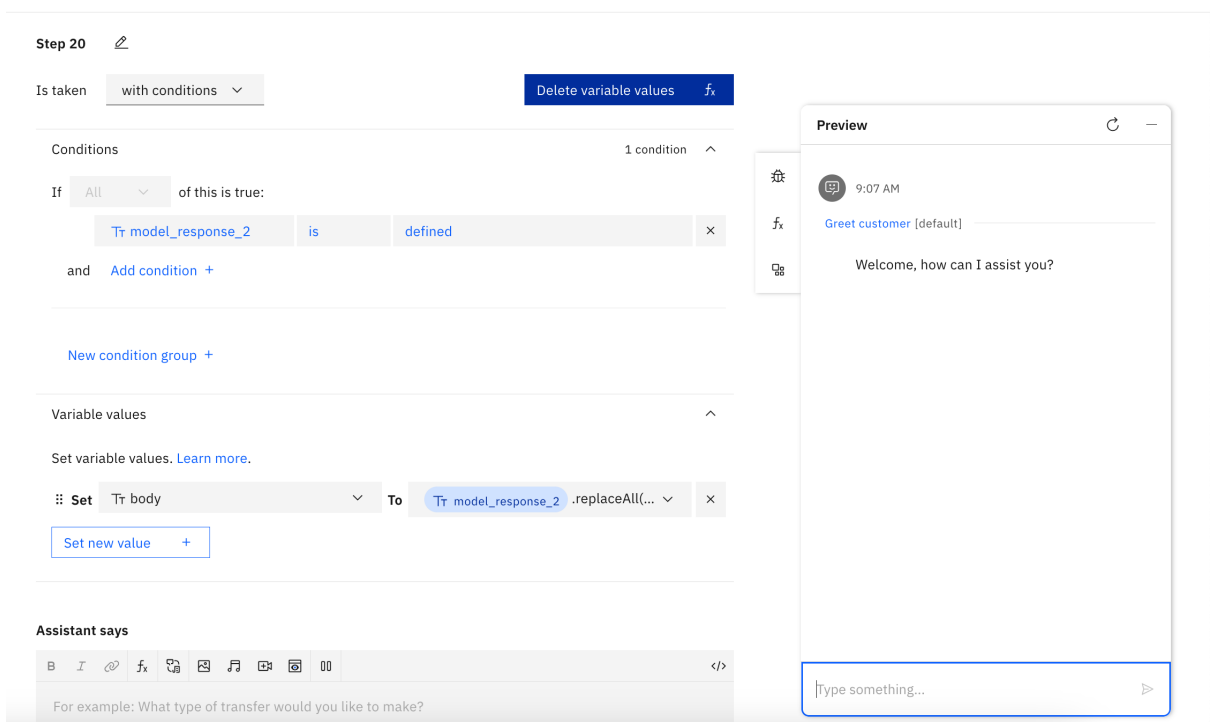

2.11 Update the project_id with watsonx.ai project id and click apply.

2.12 Do the same on step 17.

2.13 Save the actions and click on Preview.

2.14 Verify the changes.
